

## Newsletter October 2007

Welcome to New Smart Systems newsletter.

### BUSINESS NEWS:

POLAND: Fotis is smart and buys 40 pcs. MP-15 from New Smart System

Fotis Sound of Poland, one of the biggest and most respected sound companies in Poland, recently purchased 40 pcs. MP-15 from New Smart System, and immediately put them to use in various events throughout Poland with great success.

Mr. Fotis states: "The MP-15 has proven to be very successful with both artists and monitor engineers. I consider the investment in MP-15 as one of the best investments I have done in many years."

### PRODUCT NEWS:

MP-15 has been updated, and is now available in mirrored pairs (Left / Right)

MP-12 is now in final developing stage and will be available for delivery in November 2007. MP-12 is a 12" and 1,4" construction, using the same compression driver as MP-15.

Products in development:

MP-9 is a dual 8" + 1" construction with similar profile as MP-8. The two 8" will give a powerful LF in a compact cabinet, and the 1" driver is a powerful compression driver giving higher max-SPL than MP-8. First sample versions available in November 2007. Final product and production expected February 2008.

MP-10 is a 10" + 1" construction in traditional MP series profile. First sample versions available in November 2007. Final product and production expected February 2008.

F-210 is a dual 10" +1,4" construction. It is intended to use on a stick, or as a front fill on stage (ideal in combination with Line Arrays). The design will be slim and dispersion is 60 x 40 degree rotatable. The F-210 will also be ideal in AV presentations, installations and as small PA. First sample versions available in November 2007. Final product and production expected February 2008.

F-15 is a 15" + 2" construction based on the D-PAC AM-1. The cabinet is updated, and it will be possible to place two F-15 close together in a cluster, to provide extra wide coverage as f.ex. centre clusters. First sample versions available in January 2008. Final product and production expected March 2008.

S-15 is a 15" subwoofer in compact dimensions. First sample versions available in January 2008 Final product and production expected March 2008.

ADT-800 is a dual channel amplifier to build into F-series loudspeakers. It provides 400W RMS to LF and 100W RMS to HF. The internal DSP is programmable, or can be factory set. Power supply is PWM type with polyfase technology. First sample versions available in December 2007. Final product and production expected February 2008.

ADT-1600 is a single channel amplifier intended for use in high power subwoofers. It provides 800W RMS, and the internal DSP is programmable, or can be factory set. Power supply is PWM type with polyfase technology. First sample versions available in December 2007. Final product and production expected February 2008.

All dates are approximately and subject to change without prior notice. If you have any questions, comments or requests, please do not hesitate to contact me on [anders@newsmartsystem.com](mailto:anders@newsmartsystem.com) More information about new products and developments will be available on [www.newsmartsystem.com](http://www.newsmartsystem.com) this week.

Best regards

Anders Christensen
